Home Automation
& Network Integration

A smarter way to live

Domodo delivers superior home technology solutions to clients across the globe. With over 20 years in business, Domodo designs, integrates, installs and maintains bespoke systems that enhance our customers' homes in a discreet and aesthetic fashion.

Home Automation

Anything in your home can be controlled today through the touch of a button or from the palm of your hand: open the front door, turn the lights off in the kitchen, raise the temperature in the family room, send audio and video in the bedrooms — everything is possible. If you combine this with unobtrusive environmental sensors, you will achieve levels of automation never seen before. At Domodo, we listen to your needs and transform them into bespoke, easy-to-use features that enhance your living space.

Systems Integration

At Domodo, we offer comprehensive project management and installation services for all your technology needs in new-build properties. We can also easily work with what you have and add a wow factor to your existing home by upgrading your current electronics and infrastructure. We seamlessly integrate electronics and technologies from different brands or fields of application. If you already own a home automation system, home cinema or audio distribution setup that has been installed by another company, you can always take advantage of our service maintenance contract.

Maintenance

Our service continues after the installation is complete. We provide training so that you can take full advantage of your home automation experience. As part of the Domodo maintenance contract, our team is on call to help you in any way we can so that you are able to fully enjoy the features of your space. We monitor the health of your systems from our data centre 24/7 and can fix most problems remotely, even before you realise you have one. In case an engineer is required on site, we have fast guaranteed response times.

Experience

Using the latest technologies available in the market, our experienced engineers support you with the highest level of service. We have worked with some of the best designers and architects in the industry in the US and the UK, collaborating on impressive installations for home automation, network and security systems.

Get in touch

Let us help you create your perfect home. We believe that a successful technology implementation requires solid planning and a foundation which only a reliable and experienced partner can provide. If you are ready to enhance the way you live in your home or wish to remain connected to your holiday residence when you are away, please speak to us for a word of advice.
